

## OPERATING STEPS

1. Put one or any combination of blades on bolt and secure with wing nut. (The larger holes will generally produce larger bubbles. For maximum bubble production, use all 5 blades.)

2. Fill well with Bubble solution.
3. Plug into any household outlet and turn on switch located at back of the machine.
4. Refill as needed.
5. Machine should be cleaned after each use. Blades should be removed and rinsed thoroughly and dried. Clean outside of case with sponge and warm water. DO NOT submerge Bubble Blizzard or pour water into Fan or Blower Tube.

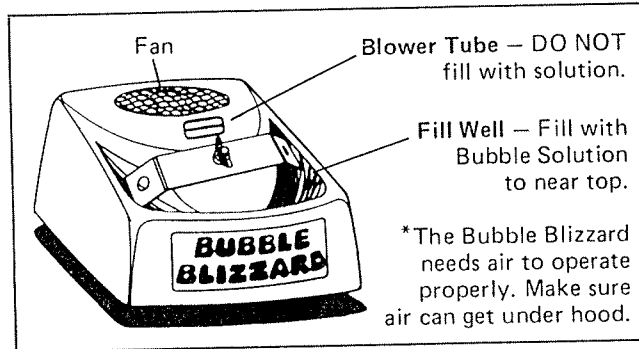

## SOLUTION

We recommend commercial bubble solution (sold as a kid's toy throughout the world) for use with the Bubble Blizzard. If bubble solution is not available with the machine rental, it can be found in drug, discount and toy stores. The brand of solution we recommend is Chemtoy generally sold under the name "Wonder Bubbles."

By adding a small squirt of "Joy" liquid dish soap to the bottle of bubble solution, you can increase the quantity of bubbles produced and produce longer lasting, more durable bubbles. However, this WILL increase the amount of residue that is left when bubbles break and should only be considered for outdoor use.
